TinkerCad is a really beautiful site, I learn a lot from it. It kind of reminds you of AutoCad back in days. The design is really easy with it. I really like the Arduino part. I wish we learned it before we start working with Arduino, it will make the work easier and more organized. At the beginning, it was hard to know how to draw the lines, they overlap each other but I got used to it and now it's much easier. Not only that, there are examples and their codes which gives me more ideas. As I said before, if I know the website before I start my final project that will save more time instead of searching about what I want plus the experiments I did. It's a good idea to start working in TinkerCad before starting building the project to show me any electrical failure. I don't want to blow stuff up.
